

Project Description

A software that displays various AI tools, their descriptions, and direct links to them.

Examples of what we are trying to build:

- <https://aitoptools.com/>
- <https://ilib.com/>
- <https://aizones.io/>
- <https://aitools.fyi>
- <https://gpte.ai>

Specific features and functionalities

- There will be a website version and a mobile app version
- The website is going to contain all possible AI tools.
- Each AI tool will be described briefly for users to know what it does.
- Each AI listing will have a YouTube tutorial to teach how to use the tool.
- Each AI listing will have a direct link to the AI tool
- AI integration to take such queries for quick searchers.
- Users can review and add comments on their experience with using the AI tool
- Users can bookmark tools in their accounts to go back to later on.
- Implementation of a secure user authentication system to enable bookmarking, commenting, and reviewing AI tools.
- Development of a robust search engine with filters (e.g., tool type, industry, use case) to facilitate quick discovery of AI tools.
- Allow users to submit new AI tools for consideration, with a review process to ensure quality and relevance.
- Organization of AI tools into categories (e.g., productivity, content creation, research) for easier navigation and discovery.

Qualities / Constraints the website/mobile app must possess

- It must serve its purpose without stress.
- It must be fully responsive.
- It must be compatible with various modern browsers.
- Quick loading time.
- There must be minimal or no security threats
- Implement robust security measures to protect user data and ensure the platform's integrity.
- It must have a great user experience.

Target audience

- People who would like to boost their productivity.
- Workers.

- Content creators
- Students
- Professionals
- Entrepreneurs
- Researchers
- Developers
- Programmers
- Designers, etc

Budget

Our current budget covers the cost of a domain and incentives for project developers. We haven't selected a project name yet, so that's pending for now.

- Cost of domain
- Incentives for project developers
- Cost of marketing and promoting platform to reach a higher audience

Risk assessment and mitigation strategies

- Regular weekly meetings to assess the project's progress
- Schedule regular updates, bug fixes, and maintenance to ensure the platform remains secure, fast, and feature-rich.

Next Discussions

- Brainstorm a name that reflects the platform's purpose and is memorable for your target audience.
- Brainstorm on a reward system or leaderboard to incentivize users to engage with the platform, share their experiences, and contribute valuable content.
- Brainstorm on various ways in which this project could be profitable for us.
